E-zine | Label | Pro

Humanworkshop created 3 Kontakt instruments which you can download completely free!

Kontakt was envisioned as a 'new-breed' software [sampler](#), the original version pushing for a stable interface to work with pitched musical sound. Some say that Kontakt's main focus was [interface design](#), enabling musicians to quickly and painlessly create their own instruments based on [sampling](#) sound sources.[wiki]

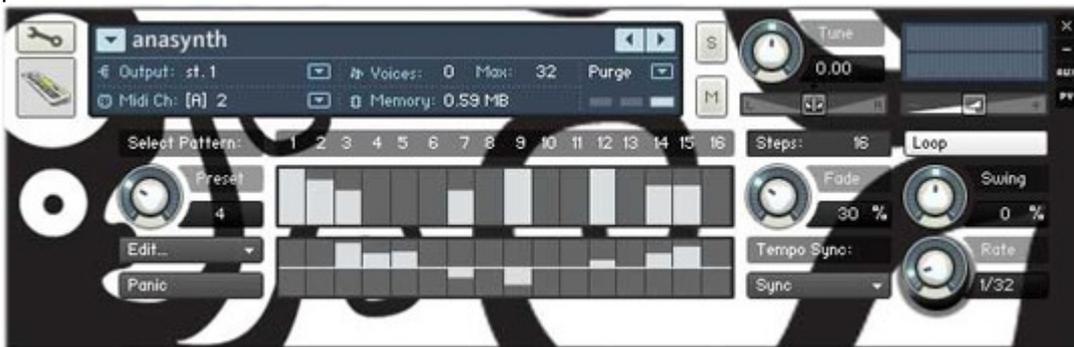

In version 3 options are almost limitless. We have tweaked single shot samples into complete chromatic pad instruments and bad ass sounding synth leads.

*I thought it would be nice to share some instruments I made during testing of [ksp scripting](#).*

Durk Kooistra

## AnaSynth

The AnaSynth is a beast that might be reminiscent of (chris) Clark type-o stuff. With step sequenced parameters for extra control.

## ArabFlutist

The ArabFlutist is basically a flute that is tuned in Harmonic Minor. It does not matter what key you hit, it will always play in the key of the scale.

## PadMeister

A true pad meister. Moody, maybe even creepy!
